WEB PROGRAMMING LABORATORY Mini Project Report-A

Project Title:
GrowMint

Submitted by:

Student Name(s): Purva Renge, Kanishka Sahal, Smita Sarangi

Roll Numbers: 16010124051, 16010124053, 16010124064

Course In-Charge:
Shruti Javkar

K. J. Somaiya School of Engineering
Department of Computer Engineering

Declaration

This is to certify that the mini project titled '**GrowMint (Digital Marketing)**' is a bonafide work carried out by the undersigned students under the guidance of Mrs. Shruti Javkar as part of the Web Programming Laboratory during the academic year 2025–2026.

Student Signature(s): _____

Date: _____

Acknowledgement

We express our sincere gratitude to the Department of Computer Engineering, K. J. Somaiya School of Engineering, Somaiya Vidyavihar University for providing the opportunity to work on this mini project. We would like to thank our course instructor Mrs. Shruti Javkar for her guidance and support.

1. Introduction

In today's digital era, businesses rely heavily on online platforms to promote their products and services, making digital marketing an essential component for growth and success. This project focuses on the design and development of a comprehensive digital marketing website that provides both user engagement and client onboarding functionalities.

The website has been developed using a combination of front-end and back-end technologies, including HTML, CSS, JavaScript, and PHP. The front-end technologies are used to design an interactive and visually appealing user interface, while PHP is utilized for server-side processing, enabling dynamic functionality such as user authentication and data handling.

The project consists of multiple interconnected web pages such as the Home page, Services page, About Us page, Contact page, Signup and Login pages, along with a dedicated client onboarding form. Each page has been carefully designed to ensure a user-friendly experience, smooth navigation, and responsive layout across different devices.

Overall, this project demonstrates the practical implementation of full-stack web development concepts by integrating front-end design with back-end processing. It highlights the importance of building responsive, interactive, and data-driven web applications that meet modern business needs.

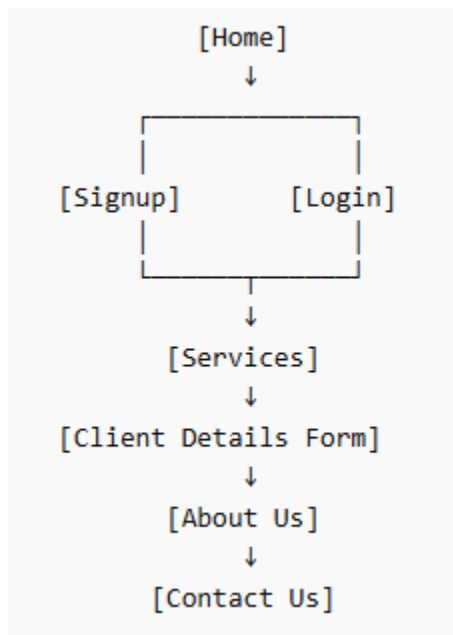

2. Problem Statement

Many businesses find it difficult to promote their services online and reach the right audience. They also do not have a proper system to share their marketing requirements clearly with digital marketing agencies. Most communication methods like calls or emails are unorganized and may miss important details. Also, many websites do not provide all features like service information, user login, and client forms in one place. So, there is a need to create a simple and user-friendly website where users can learn about services, create an account, and submit their marketing needs easily in a structured way.

3. Objectives

- To create a user-friendly digital marketing website.
- To collect client marketing requirements through a structured form.
- To improve communication between clients and the digital marketing team.
- To create a platform that simulates a real digital marketing agency system.
- To enhance user experience through animations and interactive elements.
- To design a responsive web interface using HTML, CSS, and JavaScript.
- To implement server-side scripting using PHP.
- To integrate database operations using MySQL.

4. System Architecture / Web Graph

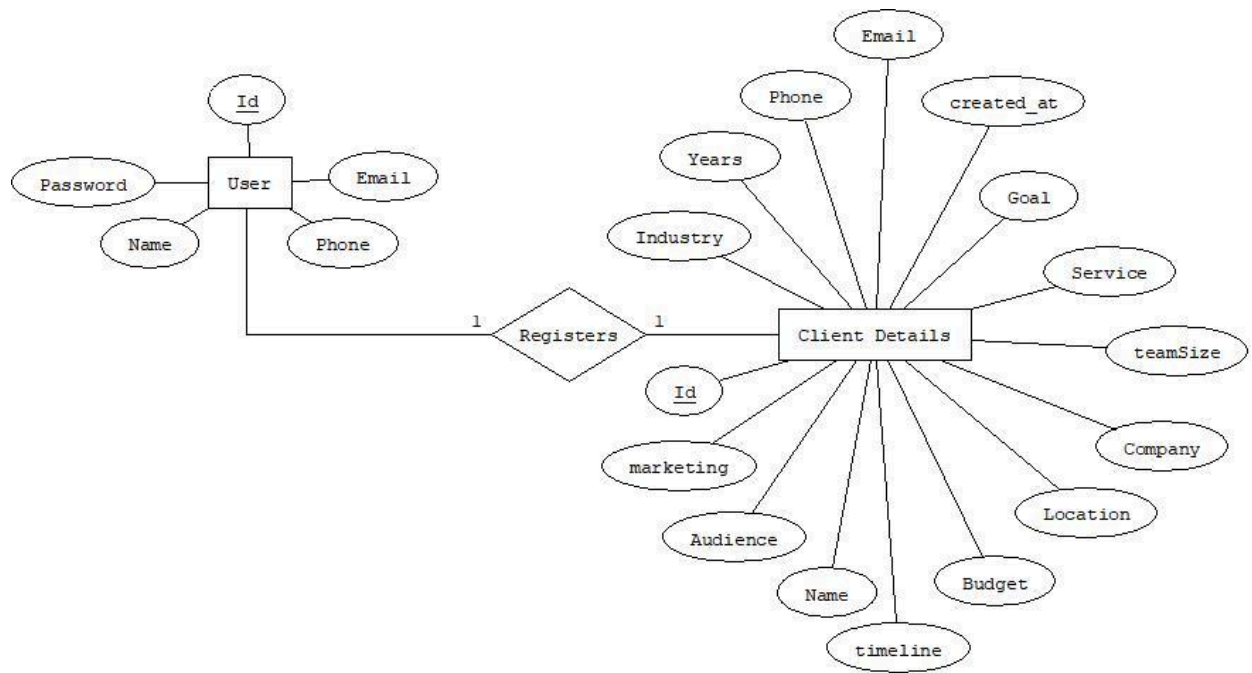

The user first lands on the Home page and can proceed to Signup to create an account, followed by Login for authentication. After logging in, the user can explore the Services offered by the company. If interested, the user can fill out the Client Details Form to submit their business and marketing requirements. The user can also visit the About Us page to learn more about the company and the Contact Us page to get in touch.

5. Web Pages Developed

Page Name	Description
Home Page	Displays introduction and navigation menu
Login Page	Allows users to log in using their credentials for authentication.
Signup Page	Allows new company representatives to create an account.
Services Page	Displays the digital marketing services offered.
About Us Page	Provides information about the company and developers.
Contact Page	Allows users to contact the company through details provided.
Client Details Form Page	Collects detailed marketing requirements and business information from clients.

6. Database Design

- **ER Diagram:**

We created two tables for our database DigitalMarketing which are linked to Signup and Client Registration pages i.e. user table and client table with attributes as shown in the diagram above. When a user signs up his details are loaded into the user table and only when he registers then his details are saved in the client table.

- **Relational Model Schema:**

1. User:

Field	Type	Description
user_id	INT(PK)	Unique ID for each user
name	VARCHAR	Name of the user
email	VARCHAR	Email of the user (unique)
password	VARCHAR	Encrypted password
phone	INT	Contact number of user

2. Client Details:

Field	Type	Description
id	INT(PK)	Unique ID assigned
company_name	VARCHAR	Name of the company
website	VARCHAR	Company website
industry	VARCHAR	Type of industry
service	VARCHAR	Selected marketing service
budget	INT	Monthly budget
goals	TEXT	Marketing goals
location	VARCHAR	Business location
years	INT	Years in business
teamSize	INT	Size of the team
audience	TEXT	Target audience
timeline	VARCHAR	Project deadline
requirements	TEXT	Detailed client requirements

7. GitHub Repository

<https://github.com/kanishkasahal24/digitalmarketing>

8. References

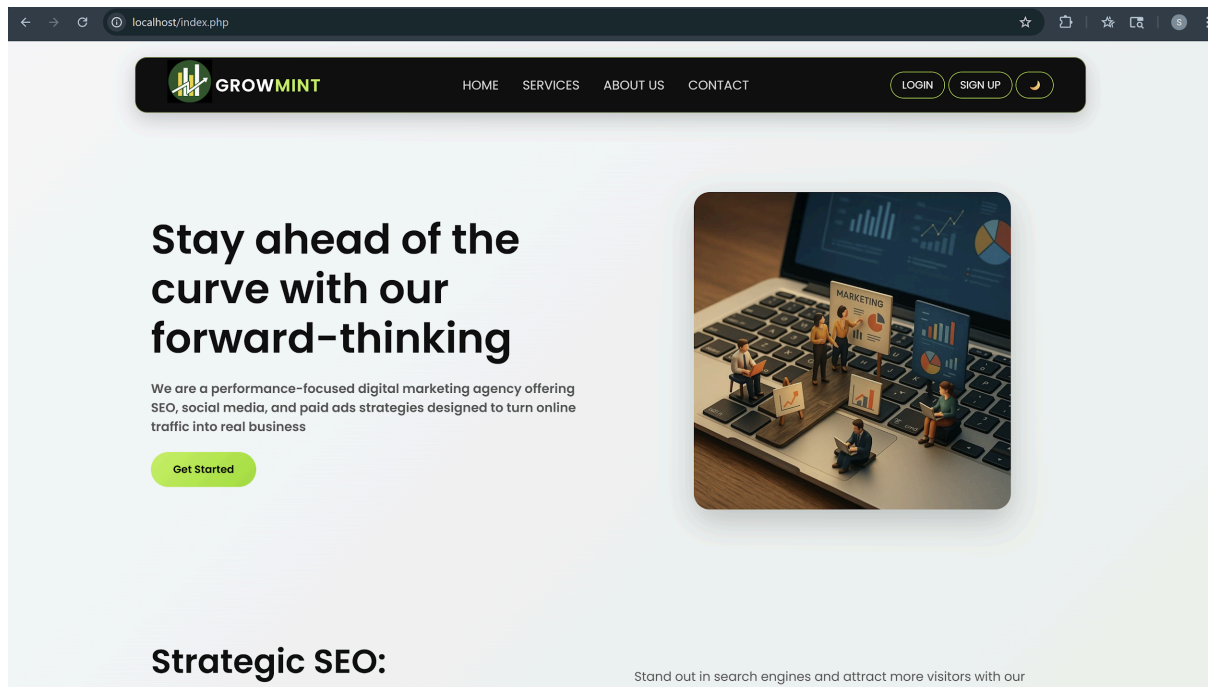

- <https://dribbble.com/tags/form>
- <https://animate.style/>
- https://www.w3schools.com/php/php_forms.asp

9. Future Scope

- **Responsive and Adaptive Design** – Use frameworks like Bootstrap to make the form look good on all screen sizes.
- **Payment Gateway Integration** – Allow clients to pay directly through the form using Stripe, PayPal, or Razorpay.
- **AI-Assisted Features** – Use AI tools to suggest marketing services or budgets based on client input
- **User Account & Dashboard** – Enable clients to create accounts and track submissions via an admin dashboard.
- **Analytics and Reporting** – Generate insights and visual reports from form submissions to aid decision-making.

11. Appendix (Source Code / Screenshots)

- Home Page

This is our home page which displays the introduction and navigation menu which contains the different webpages of our project like services, about, etc. Also when a user clicks on the get started button he is redirected to the client registration page.

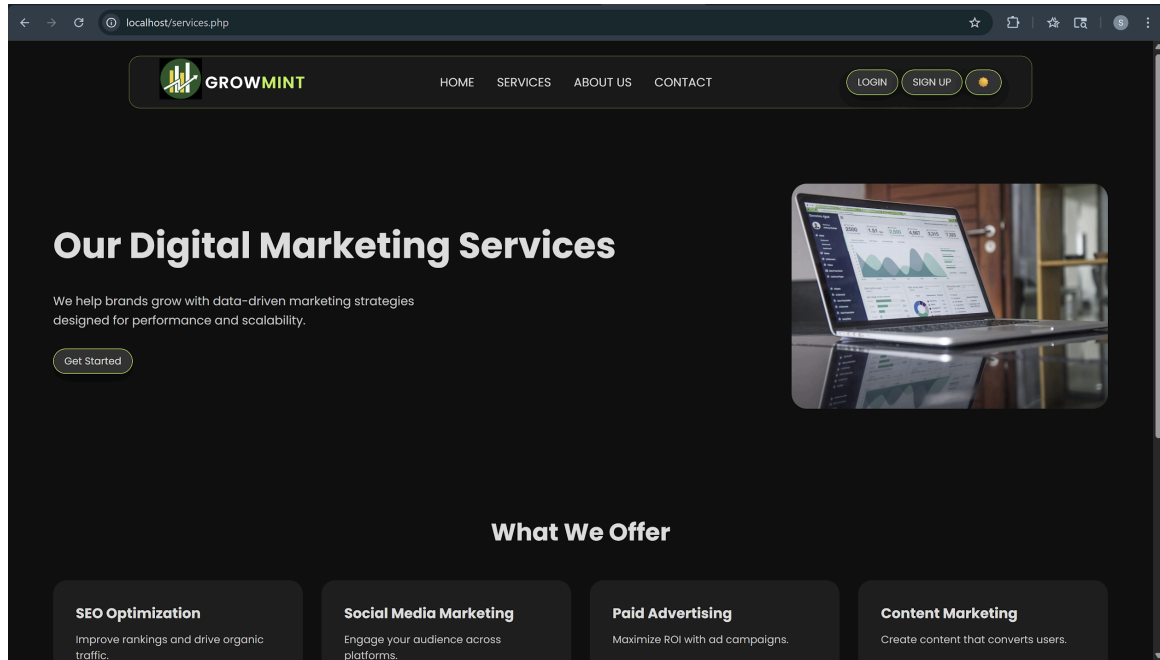

- Login and Signup Page

The screenshot shows a web browser window with the address bar displaying 'localhost/login.html'. The page content is a login form titled 'Login'. It features two input fields: 'Email' and 'Password'. Below these fields is a black 'Login' button. At the bottom of the form, there is a link that says 'Don't have an account? Sign Up'.

The screenshot shows a web browser window with the address bar displaying 'localhost/signup.html'. The page content is a 'Create Account' form. It features five input fields: 'Full Name', 'Email', 'Password', 'Confirm Password', and 'Phone Number'. Below these fields is a black 'Sign Up' button.

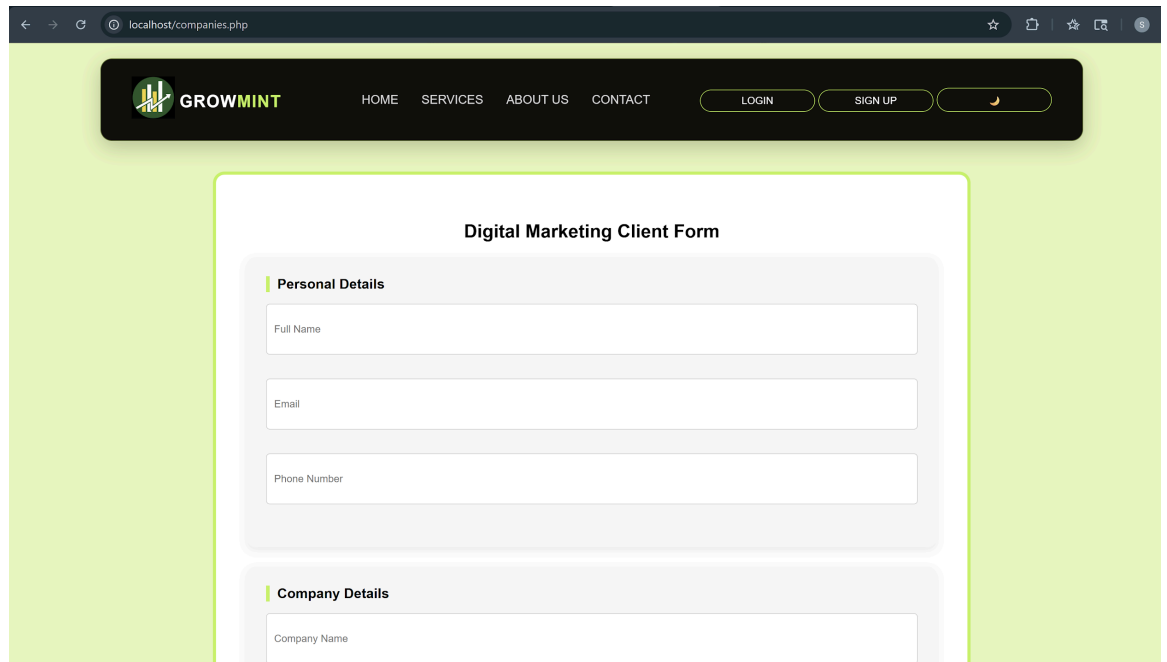

When a user wishes to create an account he is directed to a signup page and if he is already registered he can login through the login page which redirects to the home page. Users can toggle between the pages with ease.

- Services Page

This page gives information about the services provided by our website and dashboard.

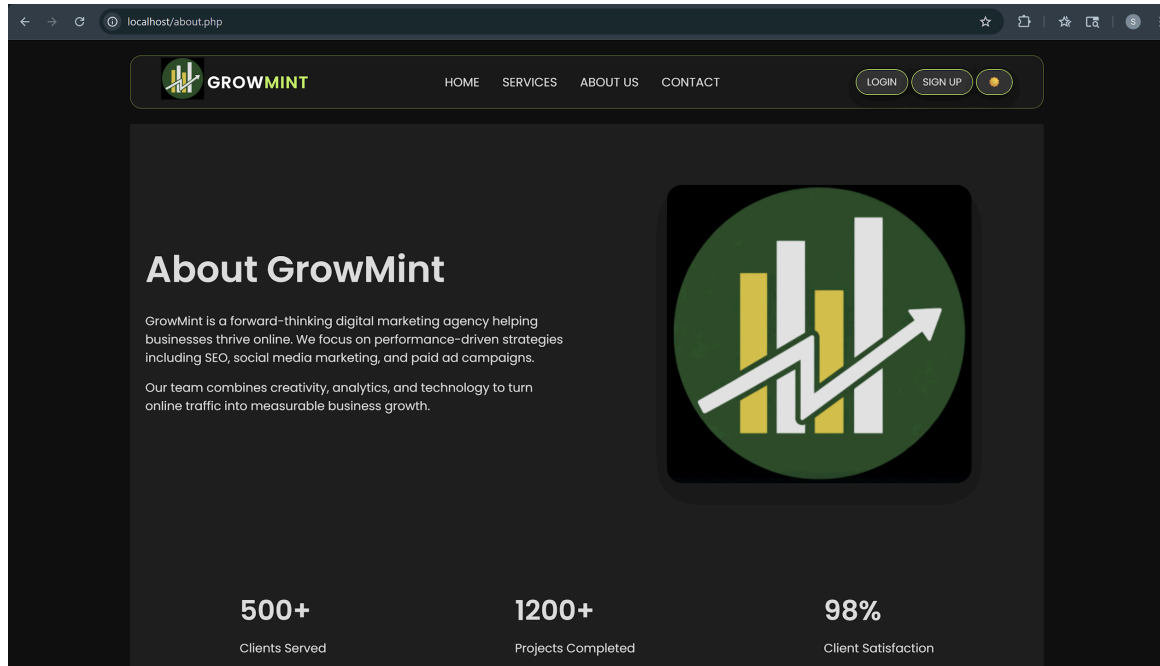

- Client Form Page

The screenshot shows a web browser window with the address bar displaying 'localhost/companies.php'. The page features a dark green header with the 'GROWMINT' logo and navigation links: HOME, SERVICES, ABOUT US, and CONTACT. There are also buttons for LOGIN, SIGN UP, and a moon icon for a dark mode toggle. The main content area is a light green box containing a 'Digital Marketing Client Form'. The form is divided into two sections: 'Personal Details' and 'Company Details'. The 'Personal Details' section includes three input fields for 'Full Name', 'Email', and 'Phone Number'. The 'Company Details' section includes one input field for 'Company Name'.

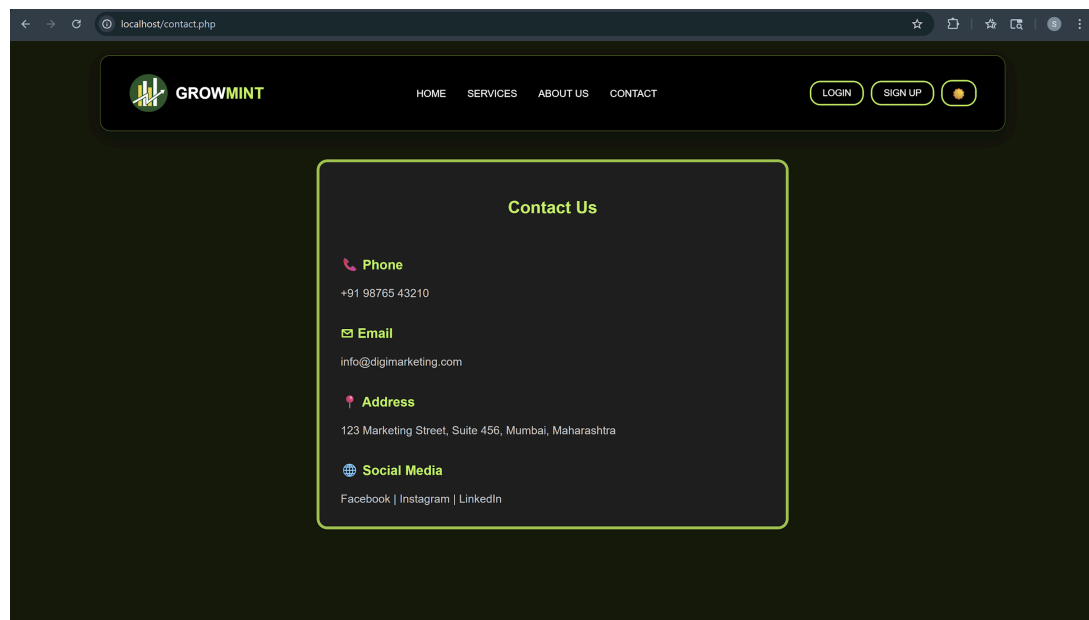

This page contains a form in which the client can enter the details of his company and the marketing requirements.

- About Page

This page is a basic about us page which contains the information about our website

- Contact Us:

This page contains the contact information.
